

PRESENTS

Seminar on Cryptocurrency – Blockchain Technology

Tuesday 18th of September 2018
18:00 – 20:00

Collège Doctoral Européen – Amphithéâtre

18:00 – 19:00

Bitcoin Blockchain Technology

Antonella Del Pozzo
CEA LIST

19:00 – 20:00

Blockchain Applications

Quentin Bramas
ICube

With Bitcoin the humanity is entering a new era

Thanks to the Internet, we are now able to communicate instantly with anyone around the globe. Several huge entities control the flow of data packets around the world, from our home to data-centers that save, compute and forward this data. Those entities are now higher than many countries.

The Blockchain technology brings something new: it links people together without the need of a central authority. People can now not only share data, but also collaborate to perform actions together, even if they do not know or trust each-other. The people become the most powerful entity!

This conference is organized by
Julián M. Del Fiore, Rodrigo Teles Hermeto, Nadja Groybeck

Université

de Strasbourg
